

Lesson 2: Uses of plastics

- I can identify the uses of plastics in our daily lives.

There are many advantages of using plastics.

Plastics can be formed into almost any shape.

Plastics are cheaper than wood, metal, or glass.

They are light but strong.

Unlike glass, they cannot break and hurt us.

Plastics can last for many years.

Look around your home and find plastics in these forms. As you find the items, tick them off.

A clear bottle for holding liquids

An electronic device

A food container

A toy or an object used for playing

Something that you could wear

Something that you use everyday
