

Lesson 3: Plastics – Environment Pollution

- I can identify how plastics pollute the environment.

Plastics last forever and they do not rot.

They release harmful smoke, if burned.

They take 200 to 1000 years to decay.

Animals mistake some types of plastic for food and eat them and choke on them because plastics cannot be digested.

Plastics take up lot of space on garbage dumps.

Explain how these actions could be harmful to our environment.

Dumping plastic food wrapping in the local park

Throwing plastic bags on the roads

Burying plastic in our garden
