

Lesson 6: Rethink, Reduce, Reuse and Recycle!

- I can find different ways to tackle the problems of plastics.

Every year in the UK, we produce tonnes of plastic and 75% of it ends in landfill.

That's a waste!

In Nepal, plastic is treated as something valuable that can be made into new products.

We could do that too!

, dubbed “Queen of Recycling,” is a Gambian activist who started the recycling movement called One Plastic Bag in the Gambia. Ceesay founded a project that creates plastic yarn and forms bags out of the upcycled waste.

What would you do?

Imagine you are a designer, engineer, or scientist. What ideas do you have to improve how to sustain plastics?

Rethink!

Reduce!

Reuse!

Recycle!
