

Three children buy toys.

Can you work out who buys what?

Tommy buys a toy which rounds to £5  
but gets change from £5

Amir buys two toys which total  
approximately £25

Eva's toy costs 5 p more than the  
number the cost rounds to.

If you had £30, what combinations could  
you buy and what change would you  
approximately get?

Mo buys some socks and gloves.  
He estimates how much  
he'll spend.

$$£4 + £5 = £9$$

What could the actual price of the socks  
and gloves have been?

Mo has £12

He says he has enough money to buy  
three pairs of socks.

Do you agree?  
Explain why.
